Web-Based Healthcare Administrative & Patient Management Platform

Purpose of the Website:

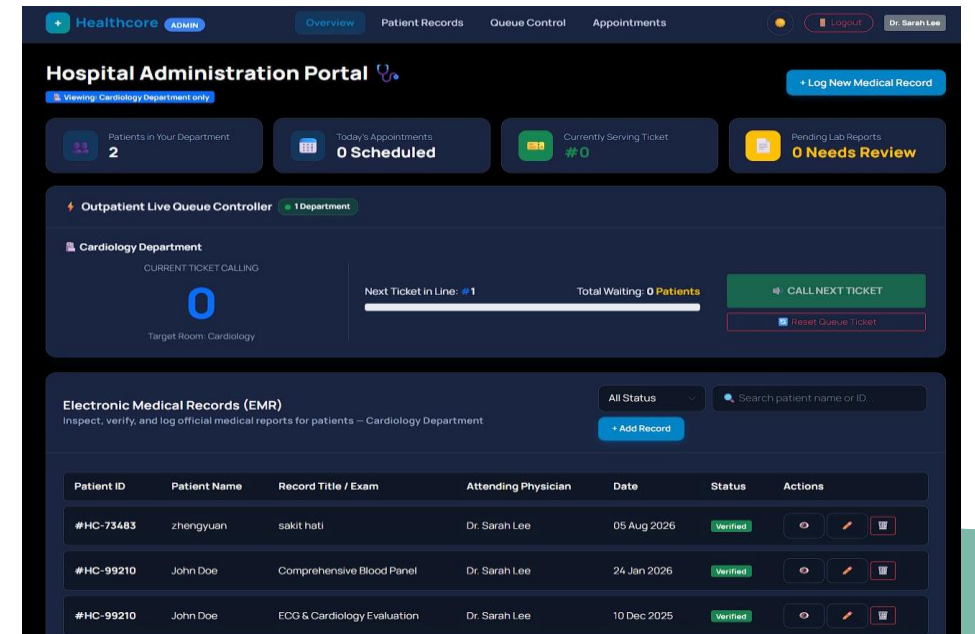

- Provide a centralized web-based interface to manage hospital administration, dynamic patient dynamic profiles, and user authentication seamlessly.
- Bridge client-side user experience with backend relational database storage.

Website Design Concept:

- Clean, professional medical layout focusing on readability, structural navigation, and ease of access for both users and administrators.

-DOCTOR PAGE

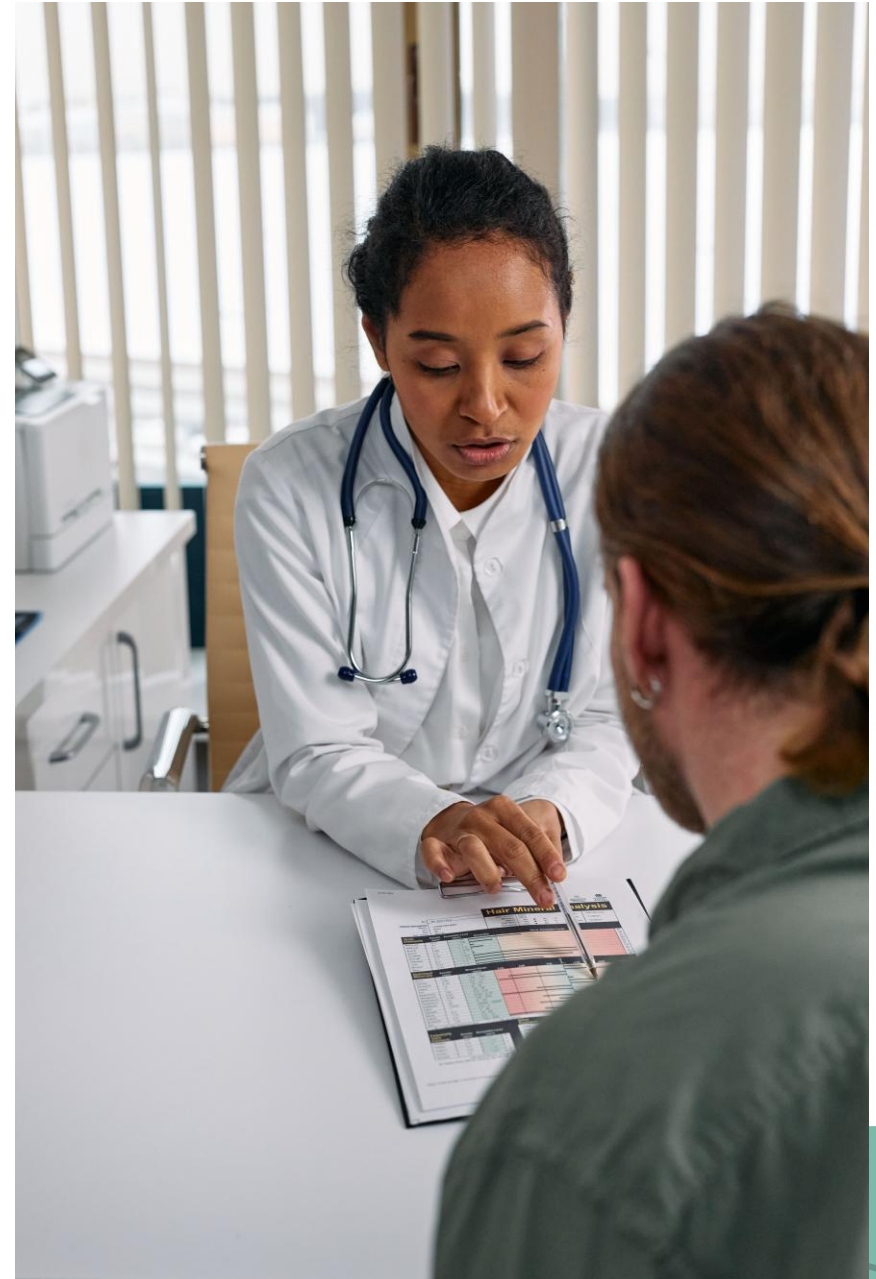

Project Concept & Target Audience

- **Inspiration & Background:**
 - Traditional healthcare administrative workflows often face challenges with fragmented patient records, slow paper-based processing, and unintuitive interfaces.
 - Inspired by the need for accessible, modern web technologies to simplify administrative overhead and user data management.
- **Core Motivation:**
 - Build a lightweight, scalable, full-stack hospital management web application that handles user authentication, profile customization, administrative control, and database persistence.

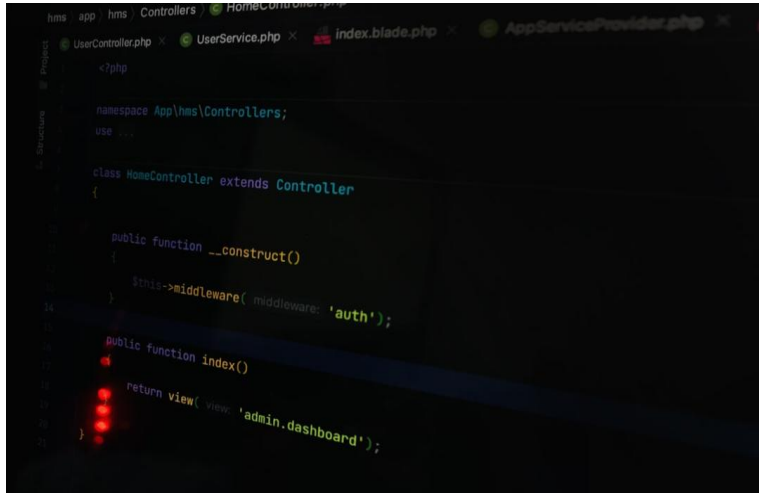

Project Concept & Target Audience

- **Target Audience & Primary Users:**
 - **Hospital Administrators:** Need quick access to manage system records and configuration settings.
 - **Patients / Registered Users:** Require secure account creation, personal profile viewing, and account customization options.
- **Needs Fulfilled:**
 - Role-based flow handling (Authentication & Admin views).
 - Data persistence for user accounts and system state.
 - Intuitive portal for personal record management (`profile.php` and `settings.html`).

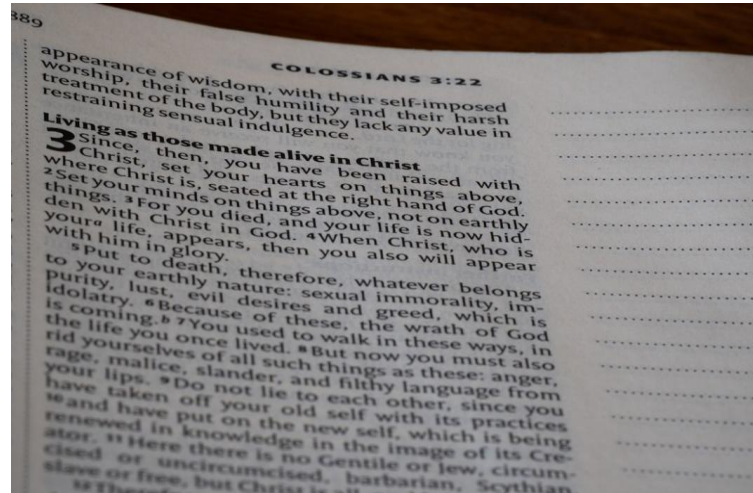

Development Stack & Tools

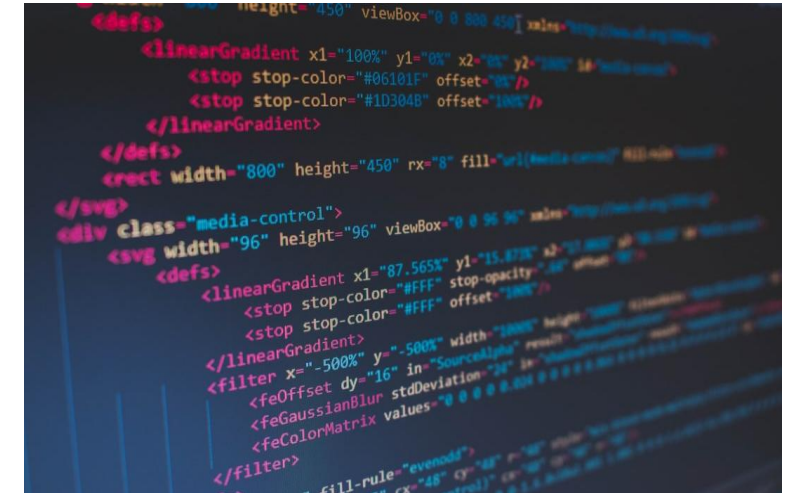

HTML5 for Structure

HTML5 forms the backbone of the platform, creating accessible, semantic pages like `index.html` and `profile.html`, ensuring compatibility across browsers and devices for seamless user interaction.

CSS3 for Styling

CSS3 styles the interface with a professional palette, responsive layouts, and intuitive navigation, enhancing readability and user experience on desktops, tablets, and smartphones.

JavaScript for Interactivity

JavaScript adds dynamic behaviors such as form validation, real-time updates, and interactive dashboards, improving usability and engagement for hospital staff and patients.

Development Stack & Tools

PHP for Loop

- Server-side business logic and routing.
- Session maintenance and auth guards.
- Dynamic content loading via auth.php.

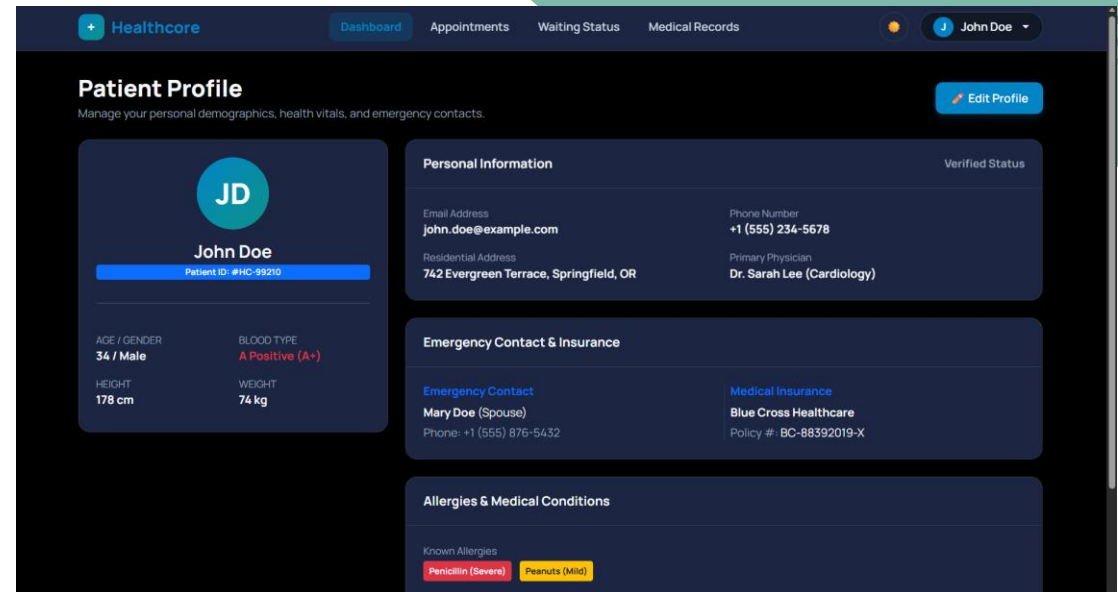

MySQL for storing

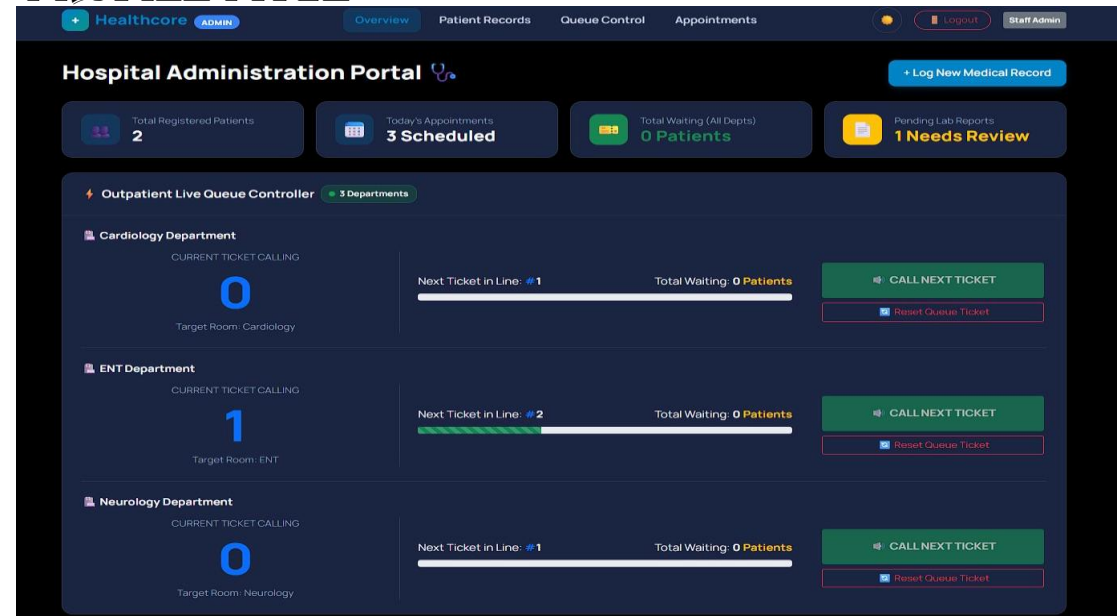

- Relational tables (users, doctors, patients).
- PDO connectivity with error handling.
- Pre-configured schema and seed data.

Key Functionalities & Standout Features

- **Core System Features:**
 - **User Authentication Engine:** Secure registration, login handling, session maintenance (`auth.php`), and safe logout workflows (`logout.php`).
 - **Administrative Dashboard:** Centralized panel (`admin.html/admin.php`) to view and oversee system data and operations.
 - **Dynamic Profile & Settings Management:** Allows registered users to view profile details and adjust preferences through backend script integration.
 - **Database Auto-Seeding & Schema:** Pre-configured SQL schema execution and dataset populator script (`seed.php`) for rapid deployment and testing.

PROFILE PAGE

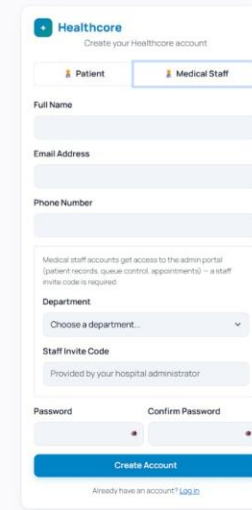

ADMIN PAGE

Key Functionalities & Standout Features

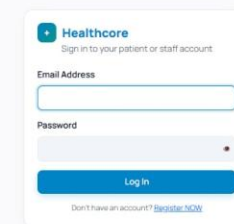

Standout Design & Architectural Highlights:

- **Hybrid Template Architecture:** Clear separation between backend execution logic (PHP) and static interface layouts (HTML/CSS).
- **Modular Database Handlers:** Centralized database connection logic (`db.php`) allowing efficient SQL execution across all dynamic endpoints.

A screenshot of the Healthcore registration page. The page has a light blue header with the Healthcore logo and the text "Create your Healthcore account". Below the header, there are two tabs: "Patient" and "Medical Staff". The "Medical Staff" tab is selected. The form fields include: "Full Name", "Email Address", "Phone Number", "Department" (a dropdown menu with "Choose a department..." selected), "Staff Invite Code" (a text field with "Provided by your hospital administrator" as a placeholder), "Password", and "Confirm Password". At the bottom, there is a blue "Create Account" button and a link "Already have an account? Log In". A date and time stamp "Wednesday, August 5, 2026 Wed 1:27 PM (Local time)" is visible in the bottom right corner.

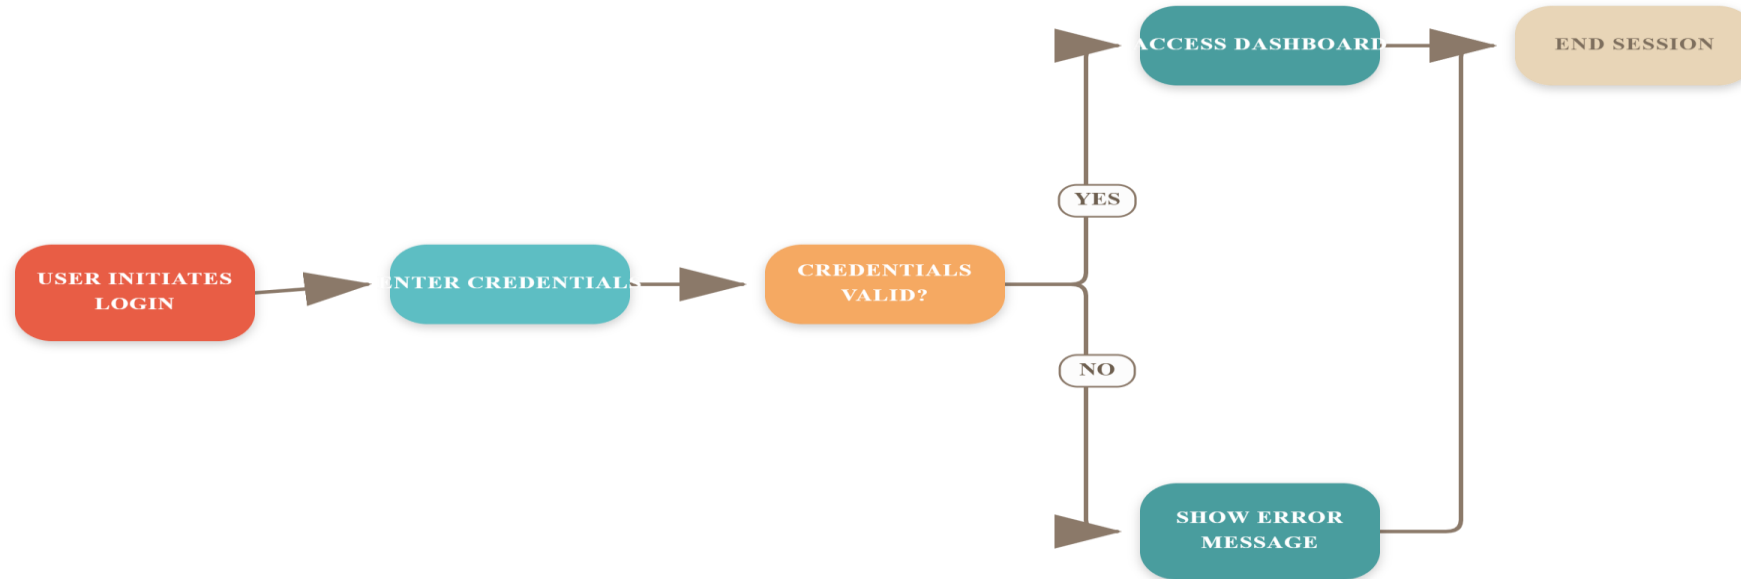

REGISTER PAGE

A screenshot of the Healthcore login page. The page has a light blue header with the Healthcore logo and the text "Sign in to your patient or staff account". Below the header, there are two tabs: "Patient" and "Medical Staff". The "Patient" tab is selected. The form fields include: "Email Address" and "Password". At the bottom, there is a blue "Log In" button and a link "Don't have an account? Register Now".

LOGIN PAGE

User Workflow & System Operations

Future Enhancement

✓ Security & Authentication Enhancements

- Use PDO or MySQLi prepared statements across all PHP query files (login.php, register.php, profile.php) to prevent SQL Injection vulnerabilities.

✓ Functional & Architecture Upgrades

- **Role-Based Access Control (RBAC):** Restrict access in auth.php based on explicit database roles (e.g., admin, doctor, patient) to prevent unauthorized portal viewing

✓ User Experience Improvements

- Provide more language option for patient
 - **Form Validation:** Enhance script.js with client-side form validation feedback (real-time error messages for invalid emails, weak passwords, or empty fields) before submitting requests to PHP scripts.
- 

THANK YOU
